

EMPATHY MAP REPORT

Food Delivery App User

Name	Yashika Shri
Register Number	261CB013
Class	BCA
Subject	UI & UX
Date	18 August 2026

1. Aim

To develop an empathy map for a food delivery app user and identify the user's needs, frustrations, behaviours and expectations in order to improve the overall user experience.

2. User Profile

The user is a college student who uses a food delivery application to order meals conveniently, save time and avoid waiting in long queues.

3. Empathy Map

THINKS & FEELS	SAYS	DOES	HEARS & SEES
Wants food quickly. Worries about price, quality and delivery time.	"I need an easy checkout." "Which restaurant has good reviews?"	Browses menus and ratings. Compares prices and tracks orders.	Friends' recommendations. Offers, reviews, food photos and delivery updates.

4. User Needs

Fast and simple food ordering • Clear menu, price and delivery fee • Secure and flexible payment options • Accurate delivery-time updates • Easy order tracking • Reliable food quality

5. User Frustrations

Long delivery or waiting time • Unexpected charges at checkout • Missing or incorrect items • Payment or app errors • Poor communication about delays • Cold or damaged food

6. User Expectations

Quick checkout • Accurate ETA • Transparent pricing • Personalized recommendations • Responsive customer support • Fresh, quality food

7. Design Opportunities

The app can improve the experience through one-tap reordering, live order tracking, transparent total pricing, smart search and filters, a visible help option, and clear ratings and food photos.

8. Conclusion

The empathy map shows that food delivery users mainly value speed, clarity and trust. Reducing waiting time, keeping users informed and making payment simple can create a smoother and more satisfying food delivery experience.
